LISTING OF THE CLAIMS I.

The following Listing of the Claims replaces, supersedes and amends all prior listings.

- (Currently Amended) A method for correcting defects in vision 1. comprising:
 - cutting a small incision in the anterior surface of the cornea of an eye; a)
 - creating a circular intracomeal channel originating at said incision; 6)
- widening said circular intracomeal channel without ablation to create a c) widened channel; and
- introducing an intracomeal implant into said widened channel through d) said incision.
- The method of claim 1, wherein said widening 2. (Original Claim) channel comprises an annular channel having a width greater than the length of said incision.
 - (Previously Canceled). 3.
- (Previously Amended) The method of claim 1, wherein creating a circular 4. intracomeal channel comprises inserting a dissector blade through said incision and rotating the dissector blade through a circular path to form said circular intracorneal channel.
- (Previously Amended) The method of claim 1, wherein creating a circular 5. intracomeal channel comprises inserting a clockwise dissector blade through said incision and rotating the clockwise dissector blade clockwise to form a clockwise channel and inserting a counterclockwise dissector blade through said incision and rotating the counterclockwise dissector blade counterclockwise to form a counterclockwise channel.
- (Previously Amended) The method of claim 1, wherein widening said circular intracorneal channel comprises inserting a channel-widening dissector blade Serial No. 09/993,946 2 Docket No. AT 2036.00

having a side leg through said incision and rotating the channel-widening dissector blade through said circular intracorneal channel to widen said circular intracorneal channel.

- 7. (Previously Amended) The method of claim 1, wherein widening said circular intracomeal channel comprises inserting a clockwise channel-widening dissector blade having a side leg through said incision and rotating the clockwise channel-widening dissector blade clockwise to widen said circular intracomeal channel and inserting a counterclockwise channel-widening dissector blade having a side leg through said incision and rotating the counterclockwise channel-widening dissector blade counterclockwise to widen said circular intracomeal channel.
 - 8. (Previously Canceled).
- 9. (Previously Amended) The method of claim 7, wherein said implant comprises an intracorneal lens, lenticule or inlay.
- 10. (Original Claim) The method of claim 9, wherein said implant is folded.
- 11. (Previously Amended) The method of claim 1, wherein said implant has a central aperture.
- 12. (Previously Amended) The method of claim 1, further comprising widening said circular intracorneal channel by inserting a clockwise pocket-forming dissector blade having a side-leg through said incision and rotating the clockwise pocket-forming dissector blade clockwise to widen said circular intracorneal channel and inserting a counterclockwise pocket-forming dissector blade having a side leg through said incision and rotating the counterclockwise pocket-forming dissector blade counterclockwise to widen said circular intracorneal channel, thereby forming an intracorneal pocket.
- 13. (Previously Amended) The method of claim 1, further comprising widening said circular intracorneal channel to a pocket by inserting a channel-widening dissector blade having a side leg through said incision and rotating the channel-widening dissector blade through said circular intracorneal channel to widen said circular intracorneal channel and inserting a pocket-forming blade having a longer side leg

Serial No. 09/993,946 Docket No. AT 2036.00 through said incision and rotating the pocket-forming dissector blade through said circular intracomeal channel to widen said circular intracomeal channel into an intracomeal pocket.

- 14. (Previously Canceled).
- 15. (Previously Amended) The method of claim 1, wherein introducing the implant into said channel comprises positioning said intracorneal implant within said intracorneal cavity at a location remote from said incision.
- 16. (Previously Amended) The method of claim 1, wherein introducing the implant into said channel comprises introducing said intracorneal implant through said. incision in a folded condition.
 - 17. (Previously Amended) The method of claim 16, further comprising
 - e) unfolding said intracorneal implant within said intracorneal cavity.
 - 18. (Previously Canceled).
 - 19. (Previously Canceled).
 - 20. (Previously Canceled).
 - 21. (Previously Canceled).
 - 22. (Previously Canceled).
- 23. (Previously Amended) The method of claim 24, wherein said continuous ring implant is folded prior to insertion.
- 24. (Currently Amended) A method of inserting an intracorneal continuous ring implant in the comea of an eye comprising:
 - a) creating a small incision in said comea;
- b) forming an open pocket within said comea through said incision without ablation of said comea; and
- c) inserting a continuous ring implant into said open pocket through said incision, said continuous ring implant being inserted into an arc-shaped tube prior to insertion into said open pocket.
